Profile

Hello, I am a 3D Generalist and Character Animator. I work mainly in Autodesk Maya and Cinema 4D but I am also proficient in multiple software. I am currently studying BA Animation at Norwich University of the Arts and I am about to finish my final year. I am available to work from May 2017 and seeking any full or part time position, in-house or remote.

Experience

Lambda Films & Animation 3D Generalist & Animator (Work Experience)

Whilst undertaking work experience at Lambda Films I was able to improve my 3D knowledge and skill set by learning Cinema 4D and working on my modelling, rigging and animation skills. I was also given the opportunity to work my first commercial animation, *The Future of AI* of which I am responsible for the design, model, rig and animation of the Robot from 0:25 to 1:13 in the video.

The Future of AI

<https://www.youtube.com/watch?v=kQMOZjpUPh4>

During my time at Norwich University of the Arts I have had the opportunity to complete live briefs for Mustard TV, Cinema Plus and the BBC which consisted of our animation teams being completely responsible for creating, animating and rendering all assets used and also liaising with clients. I was also successful in being selected to take part in a character animation project with Blue Zoo after submitting pieces of my work.
