About me

I'm a technical art student in breda mainly working with houdini.

The thing I enjoy doing most is helping others. Whether this is teaching concepts concerning houdini or creating tools for optimization.

Besides this I also do research in machine learning with the ultimate end goal of trying to make even the creation of houdini tools automated!

In my free time I like to do photography, play some dungeons & dragons and play games.

I'm currently looking for an internship. My internship period starts in January.
